

Oz Sensor 'X' Tyre Pressure & Temperature Monitoring System for Trucks, Buses and Fleets

Designed in Australia for tough Aussie conditions.

Why do i need TPMS?

We know that finishing you trip safely and on time is of the utmost importance to you.

TPMS for fleets enhances safety by preventing blow-outs, improving breaking distance and handling.

Correct tyre management reduces operating costs by avoiding downtime using less fuel and extending tyre lifetime.

Less fuel and fewer tyres reduces your company's carbon footprint.

AUTO LEARN SENSOR TECHNOLOGY

Replacement sensors can simply be screwed on and the system will automatically relearn with no special programming tools or procedures required.

OEM designed external sensor allows for a quick and easy installation in as little as one minute per wheel.

- Unique flow through design
- No need to dismount tyres
- Supports 150+ Wheels (up to 6 Trailers)

More about the sensor

- Flow through design allows for inflation without dismounting the sensor
- Transmits temperature and pressure up to 180 PSI @ 433MHz
- Battery Life of 5+ years (adjustable to customer needs)
- Alert mode detecting leakages
- Automotive qualified with robust brass body and stem

How do I access my data? In Cab Monitor, Smartphone and/or Telematics.

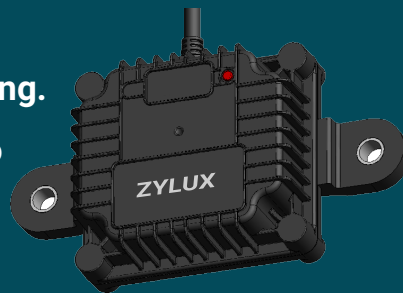

Our intelligent transceiver can be integrated with any existing Telematics and can transmit the data directly to an in cab monitor or any smartphone or tablet.

Provides drop and hook automatic Trailer detection and connection functionality to cover all your assets.

More about the Transceiver box

- CAN, RS232, RS485 and 2.4GHz comms for telematics integration (BLE mesh network between transceivers).
- Automotive qualified with IP69 rating.
- Temperature range -40°C (-40°F) to 85°C (185°F).
- Configurable through smartphone or tablet.
- TPMS intelligence and warning strategy included for all warnings and alerts.

About us

Delivering sensing solutions with over 25 years experience in TPMS for Trucks, Trailers, Buses, RV's and Cars.
